

Suggested Method for the Project

Reach out to neighbourhood via letterbox drop with an **invitation** to a free neighbourhood event.

Community members attend the **event** hosted by Christchurch City Council Community Development Advisor (or Gap Filler if contracted).

The primary purpose of the neighbourhood event is to create an opportunity for neighbours to meet, and to meet the Community Development Advisor. Introductions can be facilitated through activities as part of the event.

At the event, two or more helpers should encourage people to add their profile to the **Neighbourhood Book**.

Community members who add their profile to the Neighbourhood Book should be followed up with, and a **second gathering** planned to help gain momentum and build community relationships.

Community Asset Mapping: get to know your neighbours.

We're reaching out to key neighbourhood representatives to help us engage the residents of Inner City East and Latimer as we design a Community-specific Asset Mapping Tool: a new way to connect neighbours, strengthen resilience and realise potential from within.

What is a Community Asset Mapping Tool?

Similar to a white pages or directory, a Community Asset Mapping Tool is a place where people can share information about themselves and discover others in their neighbourhood.

A Community Asset Map is one way to connect people with their neighbours.

Our aim

An improved sense of connectedness amongst residents within the Inner City East & Latimer neighbourhoods, aiding the community to become more resilient and self-sufficient. Providing social, environmental, and economic opportunities for and with each other. Ultimately, the goal is to strengthen the community from within, and encourage a sense of pride and connectedness

It's all about the people

The Community Asset Mapping Tool will focus on the 'soft assets' within the community. It will identify people's strengths, resources, skills, experiences and passions, and how they wish to connect with one another.

Through community and representative engagement we'll create a unique Community Asset Mapping Tool for the Inner City East and Latimer neighbourhoods, for ongoing use.

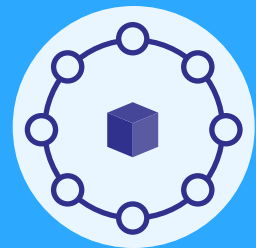

Our Process

Work with key neighbourhood representatives

Engage with the community

Design a unique Community Asset Mapping Tool
