

An Accessible City – traffic changes

Cars, buses, bicycles and pedestrians all share the travel network. To meet the changing and competing needs over the next 30 years, *An Accessible City* provides improved routes and transport choices, and suggests how we can make the best use of public spaces.

Christchurch City Council has approved the designs for three Central City transport projects and from **12 January 2015 work gets underway**.

Changes to road layouts at:

- Colombo Street from Hereford Street to St Asaph Street
- Lichfield Street from Durham Street to Manchester Street
- Tuam Street from Durham Street to Barbadoes Street including Manchester Street from Lichfield Street to St Asaph Street

For information on these changes please see the map on the back of this flyer.

For traffic updates visit www.tfc.govt.nz

An Accessible City

These transport projects dovetail with the recently completed traffic changes at Hagley / Moorhouse and Hospital corners. They work together to support the overall aim of improving traffic flow and providing safer, more people-friendly and enjoyable ways for people to get around our Central City.

These transport projects sit under the umbrella of *An Accessible City* – the transport chapter of the Christchurch Central Recovery Plan.
